Project Name	FitBuddy - AI Fitness Plan Generator Using Gemini Models
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

The fit is based on the gap between generic fitness planning and the need for a practical, editable weekly plan.

1. CUSTOMER SEGMENTS	2. PROBLEMS / PAINS	3. TRIGGERS TO ACT	4. EMOTIONS BEFORE / AFTER
Beginners; users pursuing weight loss, muscle gain or general wellness; users who want quick weekly guidance.	Generic plans may not match goal/intensity; weekly planning takes effort; static plans are hard to modify.	Starting a new routine; changing a fitness goal; feeling uncertain about exercise selection; wanting a quick plan.	Before: uncertain and overwhelmed. After: clearer weekly structure and an option to request revisions.
5. AVAILABLE SOLUTIONS - PROS / CONS	6. CUSTOMER LIMITATIONS	7. BEHAVIOR + INTENSITY	8. CHANNELS OF BEHAVIOR
Gym trainers and static fitness plans can give guidance, but they may require manual scheduling or paid support. FitBuddy automates first-draft planning but still depends on AI output quality.	Basic profile data only in current version; no wearables; no authentication; no medical assessment.	User enters details, reviews plan, follows schedule, then may submit feedback. Online interaction is the main behavior.	Web browser; local desktop/laptop; future mobile/cloud deployment.
9. PROBLEM ROOT / CAUSE	10. YOUR SOLUTION		
Lack of simple personalization in generic plans; users need a quick way to connect goal and intensity with a weekly routine.	FastAPI web app + Gemini generation + nutrition tip + feedback-based update + SQLite storage + admin view.
